Low Budget - High Performance: Bartec TECH350

The Bartec TECH350 is a **cost-effective**, yet **fully equipped** entry-level solution in the field of TPMS – with Bartec **OE quality**. The tool supports all daily TPMS activities in the workshop: activate and diagnose sensors, **OBDII** and all other relearn variants. In addition, the TECH350 includes **full** programmable sensor **coverage** known from our high-end tool TECH600* as well as an **intuitive** icon based menu navigation on a 2.8” colour display.

*Interested in our high-end yet affordable **TECH600**? Get more information about this tool which offers BLE technology for Tesla, Heavy Duty coverage, WiFi and wireless charging here: www.bartecautoid.com.

The entry-level model for TPMS with Bartec OE quality.

High-resolution 2.8 " colour display

Long-life, replaceable LiPo battery (2.3Ah)

Robust, ergonomic design

Intuitive, icon-based user interface

Comprehensive programmable sensor coverage

TPMS diagnosis and relearns via OBDII

Available in more than 20 languages

Dimensions: 204mm (length) x 100mm (width) x 35mm (depth)

Weight: 380g

Delivery scope

TPMS tool TECH350

OBDII cable

USB cable

Power supply

Your benefits at a glance

New TPMS-features:

Extended sensor identification: In addition to all regular sensor information like pressure, ID number and battery status TECH350 users can wirelessly identify whether it is a programmable or OE sensor including the manufacturer of the programmable sensor and whether it has been correctly or incorrectly programmed (available for all major programmable sensors on the market).

Faster vehicle selection: Vehicle brands with a high TPMS market share are now listed on page one of the vehicle selection. Users are not depending on the alphabetical A-Z listing anymore which makes the navigation and selection a lot faster compared to other tools available on the market.

High usability:

Due to the high-resolution colour display, the newly designed keyboard and the intuitive menu navigation, the TECH350 can be quickly and easily integrated into daily TPMS jobs without any training effort. Perfect for beginners and professionals.

Comprehensive sensor and vehicle database:

The software currently covers around 80 car brands and thus offers tyre dealers and multi-brand workshops a comprehensive database for reading, programming and relearning TPMS sensors. As usual with Bartec, the universal sensor database is not limited, i.e. the user can read and program the universal sensors of all leading TPMS manufacturers.
